Smart Template Technology™ (Professional Edition Only) This lets you rapidly create a step-by-step process from an exploded view. This saves a significant amount of time since the viewpoints, visible parts and selected parts are all set up automatically based on the exploded view. You can also rapidly create a series of isolated part views from a parts list.		✓	✓	✓
Configurations and Merge Models (Professional Edition Only) Makes it easy to work with large models. Configurations allow you to define and work with subsets of parts. With merge models 3D CAD from various (and often different) CAD programs can be merge together. Users use this when the primary designs is better explain with props or tools in some graphics.		✓	✓	✓
Project Update Wizard (Professional Edition Only) With update tools you can update entire sets of illustrations by re-importing the 3D model. This is especially useful because it allows users to get started on graphics before the design phase is complete and when 3D CAD designs change, little work is needed to update graphics.		✓	✓	✓
Publish Vector Graphics (Professional Edition Only) This provides an additional publishing format. Vectors, or line drawings, can be published to a variety of common vector formats.		✓		✓
Linkable Text Boxes (Professional Edition Only) This provides support for text and tables that may not fit on a single page or in a single column. Offers the ability to link a text box or table (parts list) from one page to another or from one column to another.			✓	✓

* Pro/ENGINEER requires additional purchase of GRANITE Import Module. GRANITE Import Module also includes additional importers for STEP, IGES, ACIS, Parasolid, and other file formats.
